

Burbo Bank

2008

During summer 2008 Osiris were contracted by DONG Energy to provide diving and tower access services on their offshore wind farm Burbo Bank.

Following our involvement in the cable installation project, our latest project at this site was to complete the underwater inspection of the foundation units, rock armour and cathodic protection systems. This also involved tower access trained personnel taking cathodic protection readings utilising a silver / silver-chloride half cell to measure the resistance occurring at each location.

Other aspects of the project included underwater video inspection, CVI of the local marine growth and scour protection assessment followed by detailed report production.

Services

- Inspection of foundations
- Cathodic protection
